CUTS

Item #LU94M012, Freud Industrial Plastic Blade: LU94M Series

\$157.28

Thank you for shopping with us!

Application: Plexiglas & Plastics

This industrial blade cuts acrylics, polycarbonates, and other plastics, which leaves a smooth finish without melting. By combining micrograin carbide tips with a specially modified triple chip grind, these blades will give a clean smooth cut. These blades produce less heat to keep the cut edge crisp.

Premium TiCo™ HI-Density Carbide Plastic Blend for Maximum Performance. Modified Triple Chip Grind (MTCG) Tooth Design enables material to remain cool while cutting, eliminating melting. Negative Hook Angle produces a superior finish without grabbing the material. Silver Ice™ Coating resists corrosion and pitch buildup.

Ideal For: Plexiglas and Plastics. Depth of cut (1/4" to 1-5/8").

Tip: For best results, set your saw so that the blade is exposed only enough that one half of a carbide tip protrudes beyond the material to be cut.

SPECIFICATIONS

Diameter	12 in
Arbor	1 in
Kerf	.110 in
Plate	.087 in
Teeth	96 MTCG
Type	Silver Ice
Manufacturer	Freud Tools
