Item #PP-30075AB, Tenryu Panel-Pro Series Saw Blades \$205.20

Thank you for shopping with us!

Panel Saw.

Excellent for long lasting precise cuts in wood, wood composites, and laminated materials on panel saws.

Panel saws are often used to cut large sheets of "difficult" material like MDF, melamine, or particle board. These materials are laden with chemicals and adhesives, which attack the carbide to cause corrosion of the cutting edge. The Panel-Pro blades come equipped with our best anti-corrosive micro-grain carbide. That plus our super-flat, perfectly tensioned plate adds up to precise, long lasting performance on your panel saw.

For cutting aluminum materials on panel saws, see our Alumic-Cut Series blades. For cutting Solid Surface Materials, refer to our Pro Series for Solid Surface.

Try these blades even without the scoring saw—you'll love the results!

Each blade features:

- Fully hardened, expertly tensioned tool-steel body for true and accurate cuts.
- High-grade, extra hard, wear-resistant carbide tips for long life.
- Fine grit honing of carbide edges for clean, smooth cuts.
- Resin bond-filled expansion slots for reduced vibration and quieter cutting.

SPECIFICATIONS	
Grind	ATAFR
Kerf	0.11
Manufacturer	Tenryu
Teeth	75
